NOTICE

NEW STORM SEWERS AND WATER MAINS IN SHERIDAN-KALORAMA

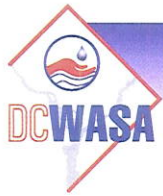

The Department of State has been informed by the Government of the District of Columbia that a major construction project will begin during July 2009 in the Sheridan-Kalorama neighborhood. This project will involve the installation of new storm sewer pipes and water mains along several streets. A map of the affected area is attached along with a description of the project from the District of Columbia Water and Sewer Authority (DCWASA). The approximate locations of the affected foreign mission properties, both office and residential, are indicated.

Once completed, the project will benefit all property owners in the neighborhood. However, since the work will involve major roadwork on various blocks over a two year period, the day to day impact on foreign missions properties in the area will be significant, particularly during daytime hours.

All missions indicated on the map should be aware that parking, including reserved diplomatic parking, will be prohibited along the portions of the street that are being excavated for the installation of the new sewer pipes and water mains. According to DC WASA, the parking prohibition will be during the hours of 7:00 am to 7:00 pm Monday through Friday while construction is underway on a block. **"NO PARKING"** signs will be posted. Missions should plan accordingly.

You will receive additional project notifications from DC WASA in the mail. Questions regarding the project may be addressed directly to DC WASA at the numbers listed at the bottom of the attached information page. The Office of Foreign Missions may also be contacted at (202) 895-3500 option 5.

ROCK CREEK SEWER SEPARATION (CSO 037) - 2009

District of Columbia Water and Sewer Authority

OVERVIEW

The Rock Creek Sewer Separation project is one of the first projects included in the DC Water and Sewer Authority's (WASA) Long Term Control Plan (LTCP). The LTCP is required by the U.S. Environmental Protection Agency to lessen pollution from combined sewer overflows (CSOs). DC WASA is required to separate the single combined sewers into separate sanitary and storm sewers for the drainage basins serving four specific overflow locations.

The drainage basin for CSO 037 consists of roughly 15.5 acres of single family residences and foreign missions. The area is served by an existing combined sewer system, which collects surface runoff, roof drainage, as well as sanitary flow. CSO occurs at the outfall, which is one of the four selected for separation in the Rock Creek area.

The work performed by DC WASA to reduce the sewage overflow will occur on the following streets: Belmont Road, NW, Kalorama Road, NW, Tracy Place, NW, Wyoming Ave, NW, and Kalorama Circle, NW. A map showing the proposed construction locations is located on the back of this update.

DC WASA WORK SCOPE WILL INCLUDE

- Install approximately 3,500 feet of new storm sewer pipes to handle stormwater during wet weather events
- Convert the existing combined sewer system into the planned sanitary sewer system
- Rehabilitate over 850 feet of the existing sewer that is being converted to the sanitary sewer
- Disconnect all sanitary sewer lines from the CSO 037 outfall and connect them to the proposed new storm sewer lines
- Replace over 3,600 feet of water mains and valves in the neighborhood streets, as well as existing lead service lines and fire hydrants scheduled for repair or replacement.
- Restore all disturbed areas

PARTNERS

DC WASA is currently working closely with the National Park Service and the District Dept of the Environment and will coordinate with other District and federal agencies in the upcoming months to ensure this project causes as little disruption as possible.

DC WASA will also meet with the Advisory Neighborhood Commissions, environmental and community associations, and individual property owners to provide regular updates throughout the project.

SCHEDULE

WASA's LTCP was approved by the Environmental Protection Agency in 2005. A preliminary design report for Rock Creek Sewer Separation was finalized in 2007, which outlined conceptual designs for the project.

- Construction is expected to start June 2009 on Belmont Road, NW
- Estimated overall contract completion date of November 2011
- Normal construction hours will be from 7am to 7pm, Monday through Friday
- No on-street parking will be allowed from 7am to 7pm Monday through Friday on blocks where construction is taking place
- **NO PARKING** signs will be posted 72 hours prior to construction start
